

Fusion

Harness the combined power of AI

CREATED BY

Jillian Hunter

Overview

Fusion is a collaborative AI application that allows users to submit a single prompt and receive simultaneous responses from ChatGPT, Gemini and Claude. The platform then automatically analyzes these outputs to identify and highlight shared key entities, providing a consolidated "Fusion Report" alongside the individual source insights.

Usage

Fusion is a multi-model AI aggregator that queries ChatGPT, Gemini and Claude simultaneously to provide a unified perspective on a single user prompt. It exists to facilitate rapid cross-verification of information and identify consensus between different models, helping users filter through individual AI biases to find the most reliable shared insights.
